

**Appendix 6** List of individuals for which no exact species affiliation could be determined. With ID-number, genus, species previously determined by the collector and their sex. In addition, diagnostic characteristics are indicated: puncturation on tergites, mesonotum, and mesopleura, and structure on galea and clypeus. The different expressions of the characteristics were noted for each individual: (bre) *C. brevigena*, (col) *C. collaris*, (hed) *C. hederiae*, (suc) *C. succinctus*, (others) fully punctured mesonotum, (+) galea with microstructure between sensilla, (-) galea without microstructure between sensilla, (?) non-classifiable, because proboscis retracted,

(---) clypeus structure not apparent in males.

ID	Genus	Previously determined as...	Sex	Tergites	Mesonotum	Mesopleura	Galea	Clypeus
